News Release– PET Tiger Real Time Data Tracking and Mapping Module

Fresno, Calif., February 18, 2013 - Orange Enterprises' Payroll Employee Tracking - PET Tiger is a paperless and wireless labor management system that integrates multiple devices such as regular time clocks, biometric clocks, handheld devices and smart phones. While performing field operations, harvesting, packing, transportation and administration those devices send data to a single database. Ag operations with all crops are electronically monitoring labor data to make efficient management decisions in real-time and improve overall productivity and transparency.

Current mobile communication technology makes it possible for agricultural operations to make labor decisions with greater precision in real time. Now owners, managers, and supervisors see productivity throughout a workday rather than wait until the end of a work week.

All Ag operations are relying more on their smart phones, tablet devices, laptops and biometrics for all kinds of data collection and management needs. For managers these tools are an extension of their offices. As the power and capabilities of mobile devices continues to grow, taking advantage of powerful new mobile applications and the unique capabilities of mobile devices become even more valuable. We are all walking terminals. The PET Tiger system extends data collection and processing capabilities to a new level of ease and friendliness. Simplicity and flexibility are the key forces behind our Tracking system.

PET Tiger data mapping visually provides, on a map, the status of a company's labor force. At any given time you can click on the flag in a map and see who is working in the field, what task is being performed, how much productivity has been achieved and what equipment is being used etc. This feature allows supervisors, managers or owners the ability to make decisions while in or out of the office. The maps are accessible on any mobile device with internet access like smartphones, iPhones, tablets as well as laptops or PCs.

The collected data is used for import to accounting software to process payroll checks and provide an exceptional cost accounting system. The time invested into payroll processing significantly decreases with use of the PET Tiger.

Orange Enterprises, Inc. incorporates the newest mobile technology into today's payroll accounting software giving it's user a seamless, paperless and wireless labor tracking solution.
